

# Ajaia Docs — Official Submission Document

## SUBMISSION.md — Ajaia Docs Project Submission

### 📄 Project Summary

- **Project Name**: Ajaia Docs
- **Repository URL**: [https://github.com/faizkhatri196/ajaia-project](https://github.com/faizkhatri196/ajaia-project)
- **Frontend Vercel Deployment**: `https://ajaia-docs.vercel.app` \*(Placeholder until Vercel build completes)\*
- **Backend Render API**: `https://ajaia-docs-api.onrender.com` \*(Placeholder until Render build completes)\*
- **Walkthrough Recording**: [ajaia\_auth\_upgrade\_demo\_1787415309736.webp](file:///C:/Users/Infinity/.gemini/antigravity-ide/brain/ed4ef895-b236-4071-b4e6-eb2309233a4c/ajaia\_auth\_upgrade\_demo\_1787415309736.webp)

### 👤 Demo Accounts

The application includes seeded demo accounts with single-click login chips on the sign-in screen:

| Name  | Email            | Password | Role / Purpose               |
|-------|------------------|----------|------------------------------|
| Alex  | alex@ajaia.demo  | demo123  | Document Owner & Creator     |
| Sarah | sarah@ajaia.demo | demo123  | Shared Editor                |
| John  | john@ajaia.demo  | demo123  | Unauthorized User (Test 403) |

### 🔑 Core Functionality Breakdown

- [x] **Lightweight Authentication**: JWT-based session tokens with `bcryptjs` password hashing and HttpOnly cookies.
- [x] **Dashboard UI**: Modern SaaS interface separating owned vs shared documents with search filtering.
- [x] **Document Creation**: Instant MongoDB creation with default titles and initial empty content.
- [x] **TipTap Rich Text Editing**: Full support for Bold, Italic, Underline, Heading 1, Heading 2, Paragraph, Bullet list, Numbered list, Undo, and Redo.
- [x] **Editable Titles**: Rename document titles directly in the editor header with immediate persistence.
- [x] **Autosave & Persistence**: Debounced autosave with real-time status badge (`Saved`, `Saving...`, `Save failed`) plus explicit manual Save button.
- [x] **Document Sharing**: Document owners can grant `EDITOR` access to other registered team members.
- [x] **Backend Authorization**: Backend checks access rights on every document route, enforcing `403 Forbidden` for unauthorized requests.
- [x] **File Import (.txt / .md)**: Import plain text or Markdown files (up to 5MB) into editable documents.
- [x] **Automated Integration Testing**: 7 passing tests in Vitest + Supertest covering creation, sharing, 403 access control, and logout.
- [x] **Browser E2E Session Verified**: Full end-to-end multi-user journey verified and recorded in browser session.
- [x] **Responsive SaaS Design**: Accessible typography, dark mode theme, subtle borders, and smooth hover/focus states.

## & p Known Limitations (Scope Decisions)

1. No Real-Time Collaboration: Updates persist via HTTP debounced autosave. Real-time cursor syncing was intentionally excluded to ensure 100% persistence reliability within the project timebox.
2. TXT / Markdown Import Only: Import pipeline accepts .txt and .md files up to 5MB. Binary formats (.pdf, .docx) are explicitly rejected with user-friendly error messages.
3. Lightweight Auth: Uses seeded accounts and JWT session tokens without email verification or OAuth.

---

## Ø=Ý. Next 2–4 Hours Roadmap

If given an additional 2–4 hours, the next features to implement would be:

1. Simple Version History: Document snapshot revision logs saved on explicit save events.
2. Document Comments: In-line text highlighting with comment threads.
3. Granular Permissions: Add VIEWER (read-only) permission option in the Share modal.
