

Ajaia Docs — System Info Reference Document

Ajaia Docs — System Info & Deployment Reference

This document provides a comprehensive reference of all system specifications, live deployment URLs, demo credentials, database schemas, core capabilities, and test results for Ajaia Docs.

Live Production & Repository URLs

- Vercel Frontend Application**: https://ajaia-project-five.vercel.app
- Vercel Info Page**: https://ajaia-project-five.vercel.app/info
- Render Backend REST API**: https://ajaia-docs-api.onrender.com
- GitHub Source Repository**: https://github.com/faizkhatri196/ajaia-project

Seeded Demo User Accounts

The database seeder automatically ensures that three demo accounts are available on server startup:

Name	Email Address	Password	Role & Test Purpose
Alex	alex@ajaia.demo	demo123	Document Owner & Creator
Sarah	sarah@ajaia.demo	demo123	Shared Editor
John	john@ajaia.demo	demo123	Unauthorized User (Tests HTTP 403 Forbidden)

Full-Stack Technology Architecture

- Frontend**: React 18, Vite, Tailwind CSS, TipTap Rich Text Editor (`@tiptap/react`, `@tiptap/starter-kit`, `@tiptap/extension-underline`), Lucide React Icons, React Router v6, Axios with credentials.
- Backend**: Node.js, Express.js, MongoDB Atlas (with in-memory `mongodb-memory-server` fallback for local dev/testing), Multer (file upload), JSON Web Tokens (`jsonwebtoken`), `bcryptjs`, Cookie Parser (`cookie-parser`), Dotenv.
- Testing**: Vitest + Supertest integration test suite (7/7 tests passing).

Database Collections & Schemas

1. User (`User`)

- `_id`: ObjectId
- `name`: String (Trimmed)
- `email`: String (Unique, Lowercase)
- `passwordHash`: String (10-round bcrypt hash)
- `createdAt`, `updatedAt`: Date

2. Document (`Document`)

- `_id`: ObjectId
- `title`: String (Default: "Untitled document")

- ``content``: String (HTML markup from TipTap)
- ``owner``: ObjectId (Ref ``User``, Indexed)
- ``createdAt``, ``updatedAt``: Date

3. Share (``Share``)

- ``_id``: ObjectId
- ``document``: ObjectId (Ref ``Document``)
- ``user``: ObjectId (Ref ``User``)
- ``permission``: String (Enum: ``['EDITOR']``)
- ``createdAt``, ``updatedAt``: Date
- `*Index*`: Compound unique on ``{ document: 1, user: 1 }``

Ø=Ý Security & Access Control Features

- **HttpOnly Cookies**: Session tokens issued as signed ``HttpOnly`` cookies (``ajaia_token``) with ``sameSite`` and ``secure`` configurations for cross-domain production security.
- **Bearer Token Fallback**: Axios client automatically attaches ``Authorization: Bearer <token>`` fallback headers if third-party cookies are restricted by browser settings.
- **Backend Authorization Middleware (``verifyDocAccess``)**: Enforces document access rights on every API endpoint. If an unauthorized user attempts to read, update, share, or delete another user's document without permission, the backend returns **HTTP 403 Forbidden**.

Ø=ÜÄ Supported Import Formats

- ``txt`` (Plain text files)
- ``md`` (Markdown files)
- **Maximum File Size**: 5 MB

Unsupported formats (e.g. `.pdf`, `.docx`) are rejected with user-friendly error messages.

Ø>Ýê Automated Integration Test Results

Executed `npx vitest run --pool=forks` inside backend/:

```

```
' tests/sharing.test.js (7 tests)
' 1. Valid login sets HttpOnly cookie & returns safe user
' 2. Invalid password returns 401 generic error
' 3. Protected API without authentication returns 401 Unauthorized
' 4. Owner creates document & shares with Sarah
' 5. Owner & Sarah access document (200 OK)
' 6. John requests Alex document without permission (403 Forbidden)
' 7. Logout API clears authentication cookie (200 OK)
```

Test Files 1 passed (1)

Tests 7 passed (7)

```
